

Certified protection

Protection against UV radiation

Tested protection

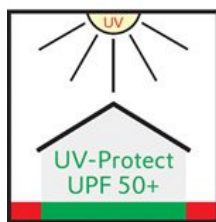

UV radiation is invisible.

Independent test laboratories confirm the reliable effectiveness of UV protection, however.

PLEXIGLAS® is examined at the Hohensteiner Institutes according to the stringent Australian standard AS/NZS 4399:1996.

- PLEXIGLAS® - whether as a multi-skin, corrugated or solid sheet - offers the highest Ultraviolet Protection Factor **UPF 50+** for roofing materials.
- PLEXIGLAS® roofing materials therefore receive the Hohensteiner quality label.

The UPF values are comparable with the well-known sun protection factors (SPF) of suntan lotions. UPF 50+ means that at least 98 percent of UV radiation is blocked.

What's more: PLEXIGLAS® shows no yellowing! This we guarantee for 30 years.

30 Year Guarantee
